The theoretical framework is a natural extension of the literature review. The purpose of the literature review, amongst other things, is to highlight gaps and shortcomings with the existing work in your field. The theoretical framework details the perspective you will take to address that gap and shortcoming.

Time complexity is extremely important to both the theory and practice of computing, but in introductory courses, coding interviews, and software development, terms such as “ $O(n)$  running time” are often used in an informal way. People don't have a precise definition of what a linear-time algorithm is, but rather assume that “they'll know it when they see it”.
