## Complex Predicates

words, the simplest possible complex predicates, consisting of an atomic exemplification formula in which all the object terms are variables bound by a lambda, denote the same relation as the simple predicate symbol involved in the atomic formula.

## The Logic of Complex Predicates

In linguistics, a compound verb or complex predicate is a multi-word compound that functions as a single verb. One component of the compound is a light verb or vector, which carries any inflections, indicating tense, mood, or aspect, but provides only fine shades of meaning. The other, "primary", component is a verb or noun which carries most of the semantics of the compound, and determines its arguments.
