There are a couple of solutions for bleeding air out of a cooling system. The first is to use the upper radiator hose to fill the engine. This allows the coolant to fill the engine from the top down, helping to force the air out. Once the upper hose overflows, connect it to the radiator and fill the remainder of the radiator.

LS SWAPS: Accessory Drives and Cooling System Guide

One of the most neglected upgrades during an engine build is the cooling system; specifically, the radiator and its supporting components. Factory cooling components, like the radiator, were designed to cool a factory engine's horsepower output. When the output of that engine is increased the amount of heat that is generated follows.

Hey guys, I know a lot of you are running LS power and I need some help solving my heat issue. My engine is new (bored and stroked LS3, 418 cu.in.), and only has 250 miles on it. The first 200 miles it never went above 210 but lately it's been hitting 230 on my gauge. I swapped out the factory style thermostat for a MR Gasket brand 180 which states the engine will run cooler.
