Studies in macroeconomic theory / 2. Redistribution and ...

The long-standing redistribution hypothesis, 1 derived from the Meltzer and Richard (1981) model, assumes a close association between actual economic inequality and redistribution. This theory presupposes that increasing market inequality leads to more demand for redistribution, thereby resulting in more redistribution; however, the posited mechanism that support for redistribution links inequality to redistribution has not been fully clarified or explored in previous studies.

Revisiting the redistribution hypothesis with perceived ...

We study how inequality affects redistribution behavior in a randomized "give-or-take" experiment that created equality, advantageous inequality, or disadvantageous inequality between two individuals before offering one of them the opportunity to either take from or give to the other.

Inequality and redistribution behavior in a give-or-take ...

More studies demonstrated the growth hampering effects of income and wealth inequalities in light of market imperfections, thus making a case for redistribution (Aghion, Caroli, and Garcia-Penalosa, 1999; Galor and Ziera, 1993).
